

Description

A fungus repellent additive for emulsion paints.

Principle Characteristics

- ◆ Additive can be mixed with **Sigmatex Superlatex, Sigmacryl, Sigmafaçade Topcoat and Sigmakwarts.**
- ◆ Can also be mixed with water to be used as an impregnating solution for not previously painted walls.
- ◆ Prevents fungus, mould and algae growth.
- ◆ Does not change the colour of the paint.
- ◆ Perfectly safe to be used in bakeries, breweries, etc.
- ◆ When mixed with emulsion paints, the shelf life will be slightly reduced.

Colours

Clear liquid

Mass Density

Approx. 1.1 g/cm³

Recommended Substrate Conditions

Not previously painted substrates:

Substrate must be dry and clean. All loose particles such as dirt, grease, etc., should be removed. Fungus, etc., should be removed by washing with a sodium bicarbonate solution in water. After drying, wash with a solution of **Sigma Bio Plus** diluted in water

Previously painted substrates:

Substrate must be cleaned and all flaking paint should be removed and the same procedure should be followed as described above.

System Specification

100 ml **Sigma Bio Plus** can be mixed with:

- 5 Lts water, or
- 5 Lts **Sigmacryl**
- 5 Lts **Sigmatex Superlatex**
- 5 Lts **Sigmakwarts**
- 5 Lts **Sigmafaçade Topcoat**

Instructions for use:

Sigma Bio Plus has to be mixed very thoroughly with water to give an opaque appearance
